SUMMARY

Software and game engineer who loves building systems that come alive. Experienced developing and shipping Unity WebGL titles as well as full-stack software in Python, Java, and JavaScript. Blends technical depth with creativity — from architecting gameplay loops and UI systems to solving backend integration challenges. Passionate about making polished, interactive experiences that feel great to use and rewarding to build.

EXPERIENCE - GAME DEVELOPMENT

StormFlag Games, Dedham, MA

10/2024 – Current

Independent studio developing online Unity titles for WebGL.

Software Engineer II

Unity Casino Games

- Served as **primary Unity developer**, delivering three fully functional 2D casino games (Derby, HiLo, Keno) within six months; personally implemented the majority of gameplay, UI, and system code. *Derby* is currently live on a client's hosted platform. 80% of engineering effort on Hilo, 65% on Derby, 70% on 3 Keno titles.
- **Established the studio's first Unity project pipeline**, organizing prefabs and assets to minimize merge conflicts and improve collaboration across developers.
- Designed and implemented **state-driven gameplay loops** using an MVC-style architecture integrating UI, animations, and audio.
- Created **mock backends** enabling full gameplay testing prior to network integration, allowing development before the engine is delivered and finalized.
- Diagnosed and resolved persistent UI rendering and layering issues, establishing standards still used across the team.
- Collaborated closely with **artists, sound designers, engineers and the client** to deliver client-ready builds.
- Mentored teammates in Unity fundamentals and workflow best practices, leveling up the whole team's productivity.
- Developed a **poker win-chance calculator** prototype and contributed to **TypeScript slot machine logic**, applying gameplay algorithm design beyond Unity.

SOLID STEEL SOFTWARE, Wellesley, MA

05/2018 – Current

Video game development (personal projects).

Video Game Programmer

- Designed, coded, and published multiple independent Unity games across mobile, desktop, and WebGL.
- **GeneHarvest: Stardust** – Solo-developed farming and breeding simulation featuring procedural genetics and progressive unlock systems.
 - Architected all systems in C#, implemented custom save/load functionality, and created art assets.
 - Released to the **App Store**, **Google Play**, and **itch.io**; also available as a **WebGL build**.
 - Embedded Links: [App Store](#) | [Google Play](#) | [Trailer](#)
- **Legends of Lasagna** – Implemented procedural dungeon generation and A* pathfinding for autonomous enemy behavior.
- Developed multiple prototypes exploring game loops, player feedback, and system design.

EXPERIENCE - SOFTWARE ENGINEERING

TRACELINK, Wilmington, MA

01/2020 – 01/2024

Cloud-based pharmaceutical supply chain platform.

Software Engineer I

- Implemented **Python and JavaScript data transformations** and validation pipelines for large-scale format migrations.
- Built **REST API endpoints** for data creation and management, increasing usability for client integrations.
- Added **Java-based validation logic** to prevent invalid records and ensure data consistency.
- Created internal **UI tools** for record search and visualization.
- Debugged production issues using **Kibana** and other monitoring tools to identify and fix critical issues.
- Served as **Scrum Master**, improving sprint planning and meeting efficiency across a 4-10 person team.

EDUCATION

Bachelor of Science, Robotics Engineering with focus in software engineering, and Biomedical Engineering (double major), **WORCESTER POLYTECHNIC INSTITUTE**, Worcester, MA (2019) - 3.30 GPA

SKILLS

Languages: C#, Java, Python, JavaScript, TypeScript, C/C++, Scala

Game Development: Unity, WebGL, Addressables, ScriptableObjects, Animator, MVC architecture, UI/UX implementation

Tools: AI, Claude Code, Chat-GPT, Git, Jira, AWS, IntelliJ, Android Studio, Agile/Scrum

Strengths: Gameplay systems design, UI problem-solving, cross-disciplinary collaboration, rapid prototyping

INTERESTS

- Ice Hockey, played 20 years including high school Varsity and WPI Club Team.
- Game Development, Sci-fi writing, Competitive Gaming, Weightlifting, Running, Cooking, Video Creation
